| Score    | Duffy &<br>Rosal          | 9                                                                                                         | 7                                                                                      | 7                                                                                                                                          | 8                                                                                                                            | 9                                                                                             | 40               |
| Comments |                           | As mentioned, CVD is one of the #1 causes of death in the U.S. and the world. Study seeks to mitigate CVD | Cross-sectional study and linear model is simple yet effective way to analyze the data | Approaching CVD from the cholesterol angle is a great way to combat the disease. Randomized survey and linear model seems a great approach | Found that poverty (socioeconomic status) gender, and age are all significant factors.                                       | Presentation was clear, structured nicely, and illustrative. Very easy to follow. Great work! |                  |
|          | Group                     | Significance                                                                                              | Innovation                                                                             | Approach                                                                                                                                   | Findings                                                                                                                     | Effective<br>Presentation                                                                     | Overall<br>Score |
| Score    | Zhao,<br>Wang,<br>Ginebra | Breast cancer remains a leading cause of mortality and morbidity among cancer diseases                    | Innovative use of survival analysis to examine the available dataset                   | Had a very strong selection of variables for statistical tests. Kaplan-meier used to identify key landmarks                                | Found that the model was statistically valid in diagnostics. Very thorough and well-examined results section in presentation | Very effective presentation that was easy to follow and gain insight from                     |                  |
| Comments |                           | 7                                                                                                         | 8                                                                                      | 9                                                                                                                                          | 9                                                                                                                            | 9                                                                                             | 42               |

|          | Group             | Significance                                                                                                                          | Innovation                                                                                          | Approach                                                                                                                     | Findings                                                                                                                                                                      | Effective Presentation                                                           | Overall Score |
|----------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|---------------|
| Score    | Mattox, Lamoreaux | Relationship between dehydration and kidney disease impact may be an increasing issue in the future w/ climate change, just a thought | Evaluation of the risk by particular construction occupation is an interesting approach to analysis | Multiple linear regression is a simple but clear method to analyze the data that will be easy to illustrate to investigators | The model was lacking a little in the way of insight. There were many predictors and little significance. Still, does not mean analysis was poor, just not a clear connection | Presentation was clear and easy to understand. The presenters were illustrative. |               |
| Comments |                   | 8                                                                                                                                     | 8                                                                                                   | 8                                                                                                                            | 7                                                                                                                                                                             | 9                                                                                | 40            |
